

**CARING FOR YOUR PRODUCT THAT HAS BEEN DECORATED BY  
BLACK ICE COATINGS**

Thank you for choosing Black Ice Coatings for your dipping needs. The best finishing products available today have been used in dipping your product. With a little care, your product will retain its “new” finish for many years to come!

- You should continue to use the same products that the manufacturer has suggested to care for your product. Keep in mind that the finish is paint, therefore you must minimize soaking your product in solvents for any period of time.
- Bug sprays containing the ingredient “deet” have been known to damage dipped finishes.
- Some oils may discolor the finish.
- If your dipped product is a firearm, be sure there are no obstructions before you use your product.
